CURRICULUM VITAE

Florian Kierski

UX/UI designer · Media designer · Aspiring IT specialist

My way into IT didn't start at the server, but at a user's screen. As a UX/UI designer I learned how people work with software and what they need from it. Since December 2025 I've been taking the step into IT, and I'm looking for an apprenticeship as an IT specialist, in application development or system integration.

EXPERIENCE

Career change into IT — 12/2025 – present

A deliberate move from design and UX into IT. I'm looking for an apprenticeship as an IT specialist and build my own projects with AI (see Projects).

Job search — UX/UI design and media design — 09/2024 – 11/2025

Hype 4 Academy — Senior UX/UI Design training — 03/2024 – 08/2024

Structured design thinking and efficient workflows. Completed the 90-day Daily UI challenge, one screen a day: hype4.academy/profile/fkierski

Freelance media designer — 02/2023 – 03/2024

Planned and delivered digital media projects for clients online and handled the communication myself, from the first request to the final delivery.

ODAV AG — UX/UI designer — 01/2021 – 02/2023

- Software concept and requirements analysis for the administration system myODAV: gathered and documented what its users needed and turned it into clear requirements.
- Regular agile sprints, close to the development team; tasks and bugs tracked in Jira and Visual Studio.

ODAV AG — Apprenticeship, media designer — 04/2019 – 12/2020

Completed a year early: shortened to two years thanks to my training at BSA Angermünde.

Digital and print: graphic and corporate design, print and digital concepts.

PROJECTS

floriankierski.de — rebuilding my website — 09/2026 – present

My biggest project so far: I'm rebuilding my website as an alley in a voxel diorama, built in Blender from Python scripts, running in the browser with Three.js. Concept, design and decisions are mine, the code is written by AI (Claude Code); after every round I test and give feedback.

Blender · Python · Three.js · Git · GitHub · Claude Code

Tools for games — 06/2026 – present

Concept, requirements and project management by me, the code is written with AI (Claude Code), versions in Git and GitHub.

- **HamMeter** · damage meter for FFXIV (Dalamud plugin) and Aion 2
- **WispUI** · UI suite for FFXIV (Dalamud plugin)
- **LumenUI** · UI suite for World of Warcraft, no longer developed
- **Timer** · in planning

My own Linux server — 2024 – 2026

Set up and ran an Ubuntu server (Hetzner VPS) following the official documentation: the Pterodactyl game server panel on my own domain, DNS and HTTPS (Certbot). Found an expired certificate in the logs, with help from the community. Switched off since.
